## **Best Management Practices**

## for Herbicide Resistance

Understand the biology of the weeds present.

2 Use a diversified approach toward weed management. Focus on preventing weedseed production and reducing the number of weed seeds in the soil seedbank.

Plant into weed-free fields and then keep fields as weed-free as possible.

4. Plant weed-free crop seed.

Scout fields routinely.

7 Apply the labeled herbicide rate at recommended weed sizes.

Emphasize cultural practices that suppress weeds by using crop competitiveness, meaning rapid-growing bushy crops do a better job of suppressing weeds than slow-growing upright crops that produce few leaves.

Prevent field-to-field and within-field movement of weed seed or vegetative reproductive structures.

Prevent an influx of weeds into the field by managing field borders.
